

Schedule 1: The Authorised Person and Activities

Purpose: This schedule places responsibility on the authorised person to ensure compliance with the conditions of this authorisation and details the activities that can be carried out.

1.1 Authorised Activities

1.1.1 The authorised activities are:

- (a) the operation of impounding works in surface water or wetlands; and
- (b) the alteration of impounding works in inland water (other than groundwater) or wetlands.

Schedule 2: Impoundment

Purpose: This schedule controls the location, operation and/or alteration of impounding works (impoundments) that can hold back or divert water. Impoundments can be dams, weirs, embankments or other structures.

2.1 Impoundment activities

2.1.1 The operation and alteration of the impoundment detailed in Table 1 must only be undertaken:

- (a) at the corresponding location(s); and
- (b) subject to the corresponding controls;

specified in Table 1.

Table 1 Impoundment activities

Impoundment	Location	Controls
Mill weir	River Tay Between NO 1174 3313 and NO 1177 3332	The impoundment height must be no greater than 2 metres. Any works in the wetted part of the channel, must not be undertaken during the period in which fish are likely to be spawning in the watercourse nor in the period between such spawning and the subsequent emergence of juvenile fish.

2.2 Fish pass

- 2.2.1 A fish pass must be provided at between NO 11745 33134 and NO 11774 33324 and thereafter operated and maintained, which facilitates the passage of fish.
- 2.2.2 The fish pass, maintenance and operation of the fish pass, must not cause harm to fish.

Schedule 3: Construction works

Purpose: This schedule limits the timing and impact from construction works on the water environment. Descriptive conditions cover impacts that may arise from pollution. Temporary structures must be removed and the water environment must be restored to at least its previous condition.

3.1 Impacts on the water environment

- 3.1.1 The alteration of the impoundment in Table 1, and any associated construction works and the installation and/or removal of any temporary structures, must not have a significant impact on the water environment as a result of:
- (a) Iridescence / sheen;
 - (b) Discolouration;
 - (c) Deposition of solids;
 - (d) Increased foaming.
- 3.1.2 The alteration of the impoundment in Table 1, and any associated construction works and the installation and/or removal of any temporary structures, must not:
- (a) Cause significant erosion of the bed or bank;
 - (b) Cause harm to freshwater pearl mussels;
 - (c) Cause harm to fish;
 - (d) Prevent the passage of migratory fish;
 - (e) Cause the spread of invasive non-native species within the water environment; or
 - (f) Have a significant adverse impact on private drinking water supplies.
- 3.1.3 Mitigation works, including the installation and/or removal of temporary structures, associated with the alteration of the impoundment in Table 1, must not be undertaken in the wetted part of inland waters:

- (a) unless it is impracticable to complete the works otherwise;
- (b) during the period in which fish are likely to be spawning nor in the period between such spawning and the subsequent emergence of juvenile fish.

3.1.4 Temporary structures on the bed or banks of the inland waters associated with the alteration of the impoundment in Table 1, must be removed as soon as reasonably practicable after completion of the authorised activities.

3.2 Restoration

3.2.1 Where the channel, bed or banks immediately adjacent to the alteration of impoundment in Table 1, have been adversely impacted by those works, they must be restored to at least their previous condition as soon as reasonably practicable.

3.2.2 Where the channel, bed or banks have been adversely impacted by any associated construction works and /or temporary structures, they must be restored to at least their previous condition as soon as reasonably practicable.
