

1 Suspended sediment – individual sites

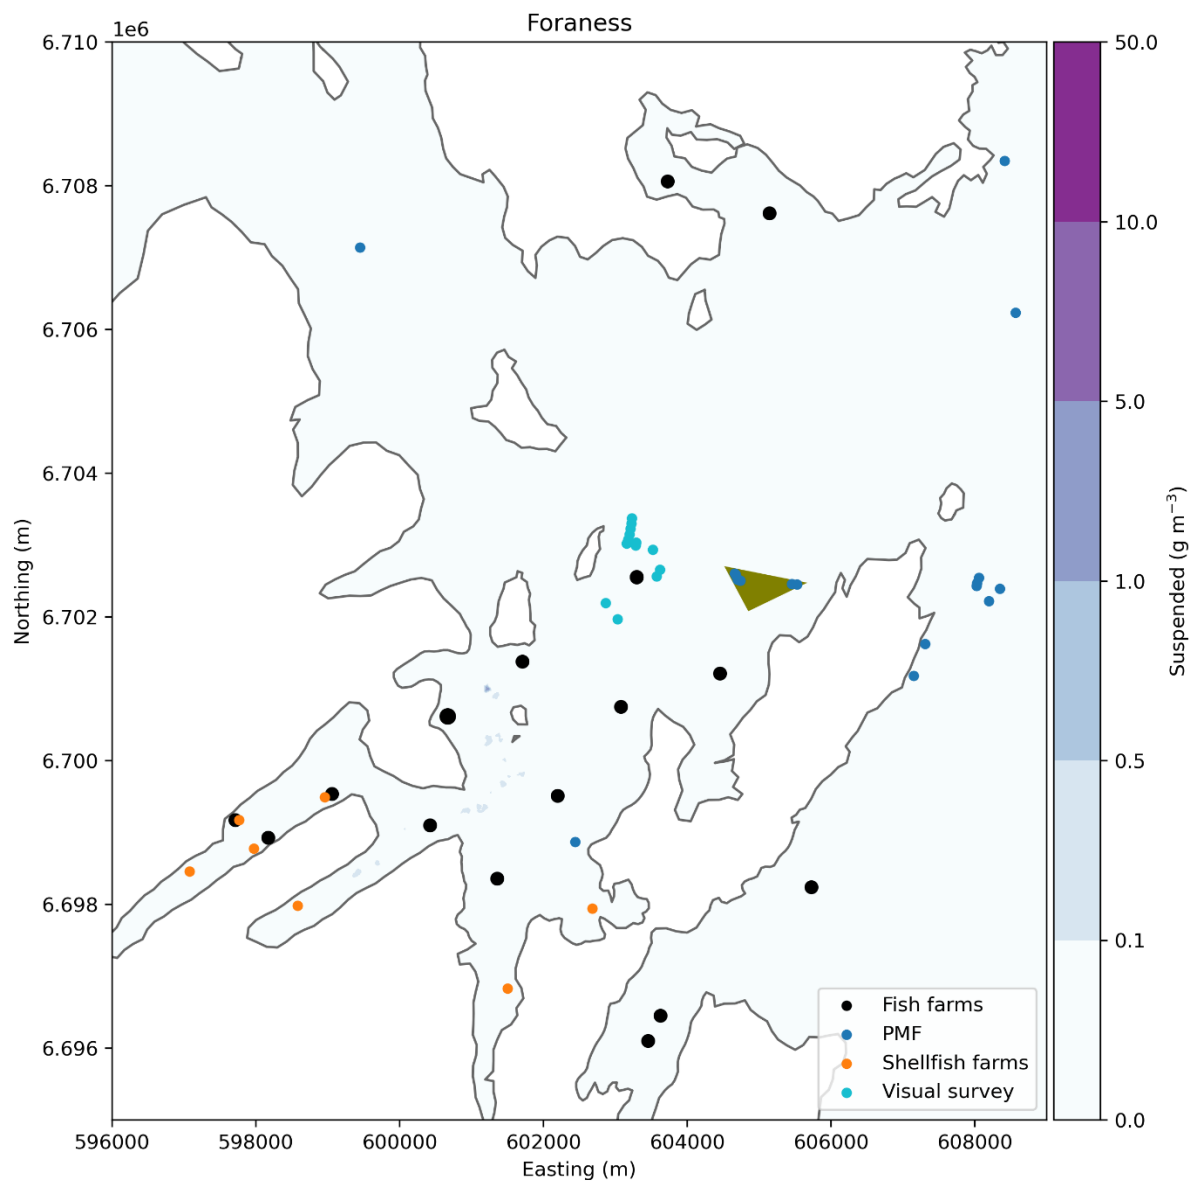

Maps of average suspended sediment concentration of the final 90 days of the simulation for individual site releases. Black points indicate farm locations (large points: included in particle release; small point: used as sensitive features only). Blue points indicate PMFs identified by SEPA, and orange points other shellfish farms identified for impact assessment. The area of maerl defined by SEPA is indicated by the dark yellow triangle.

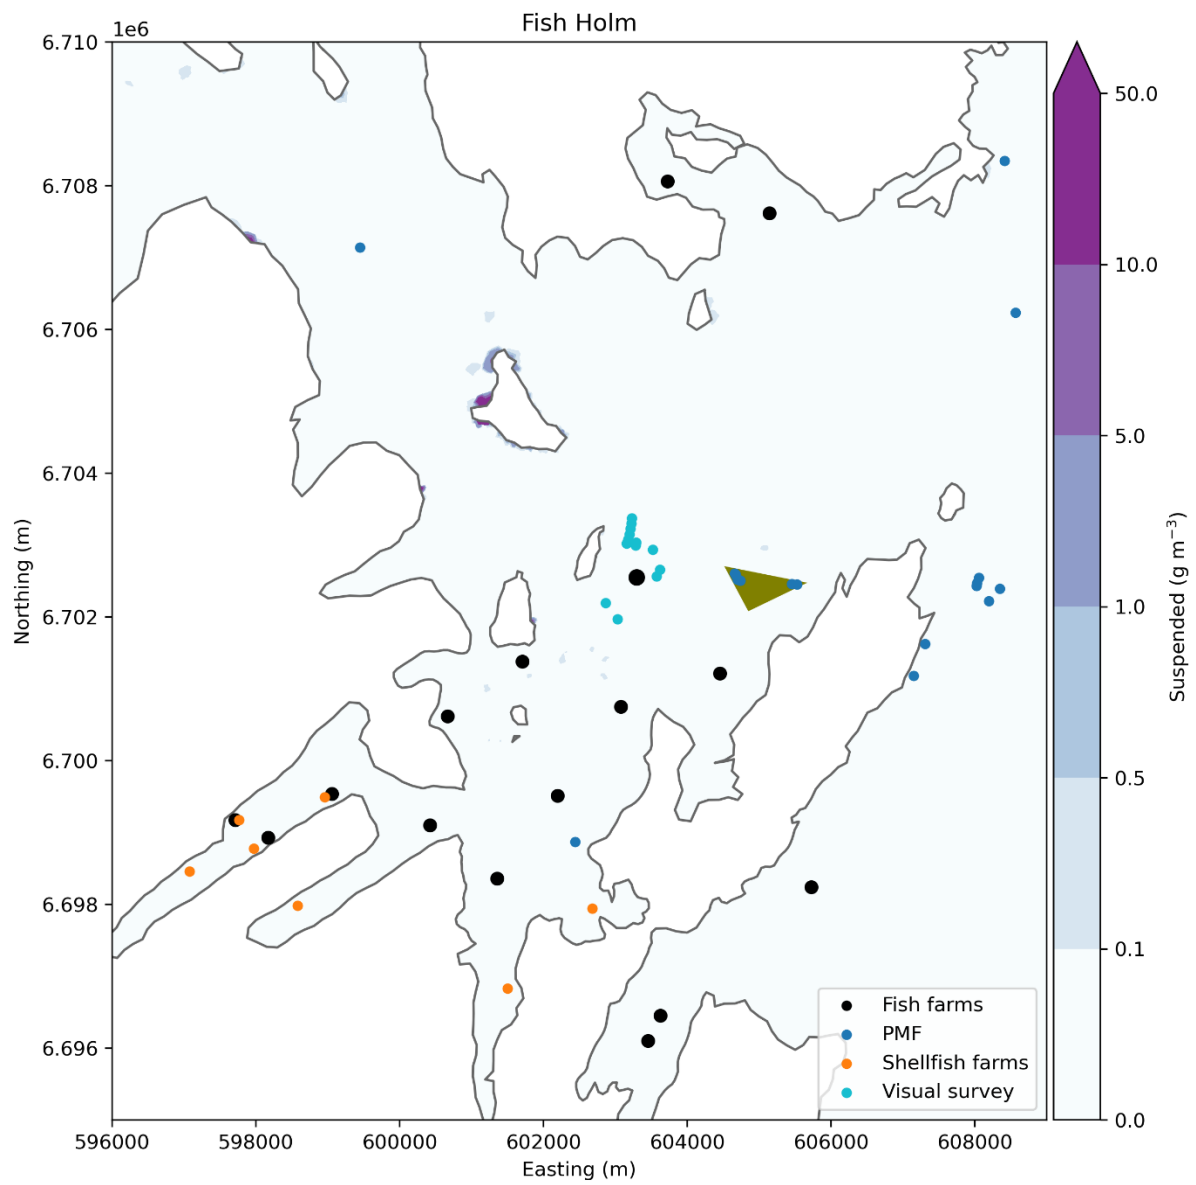

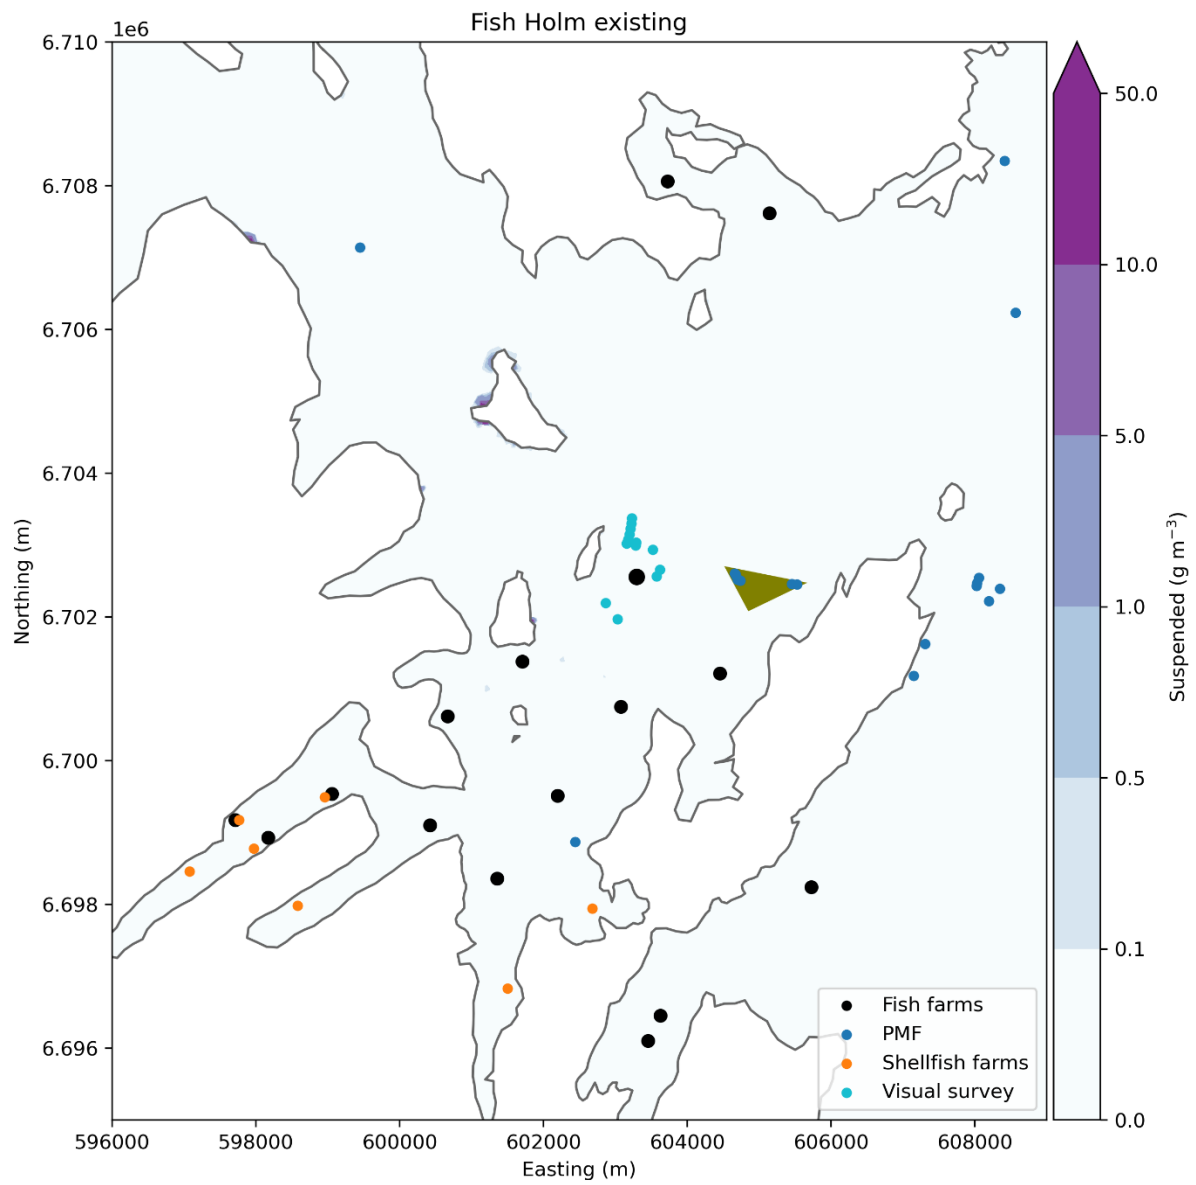

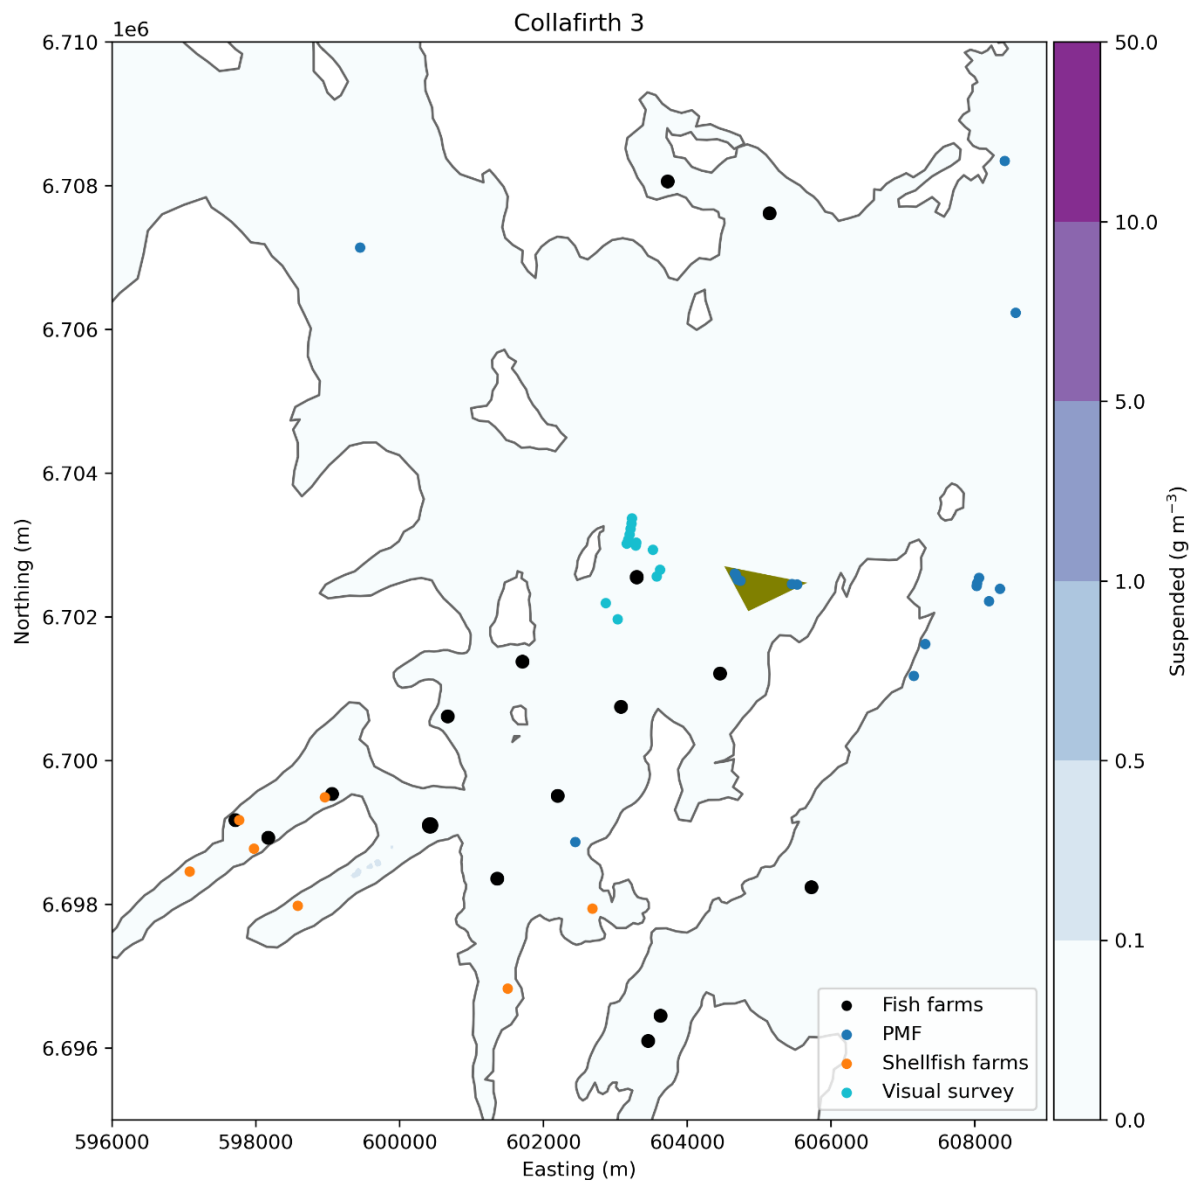

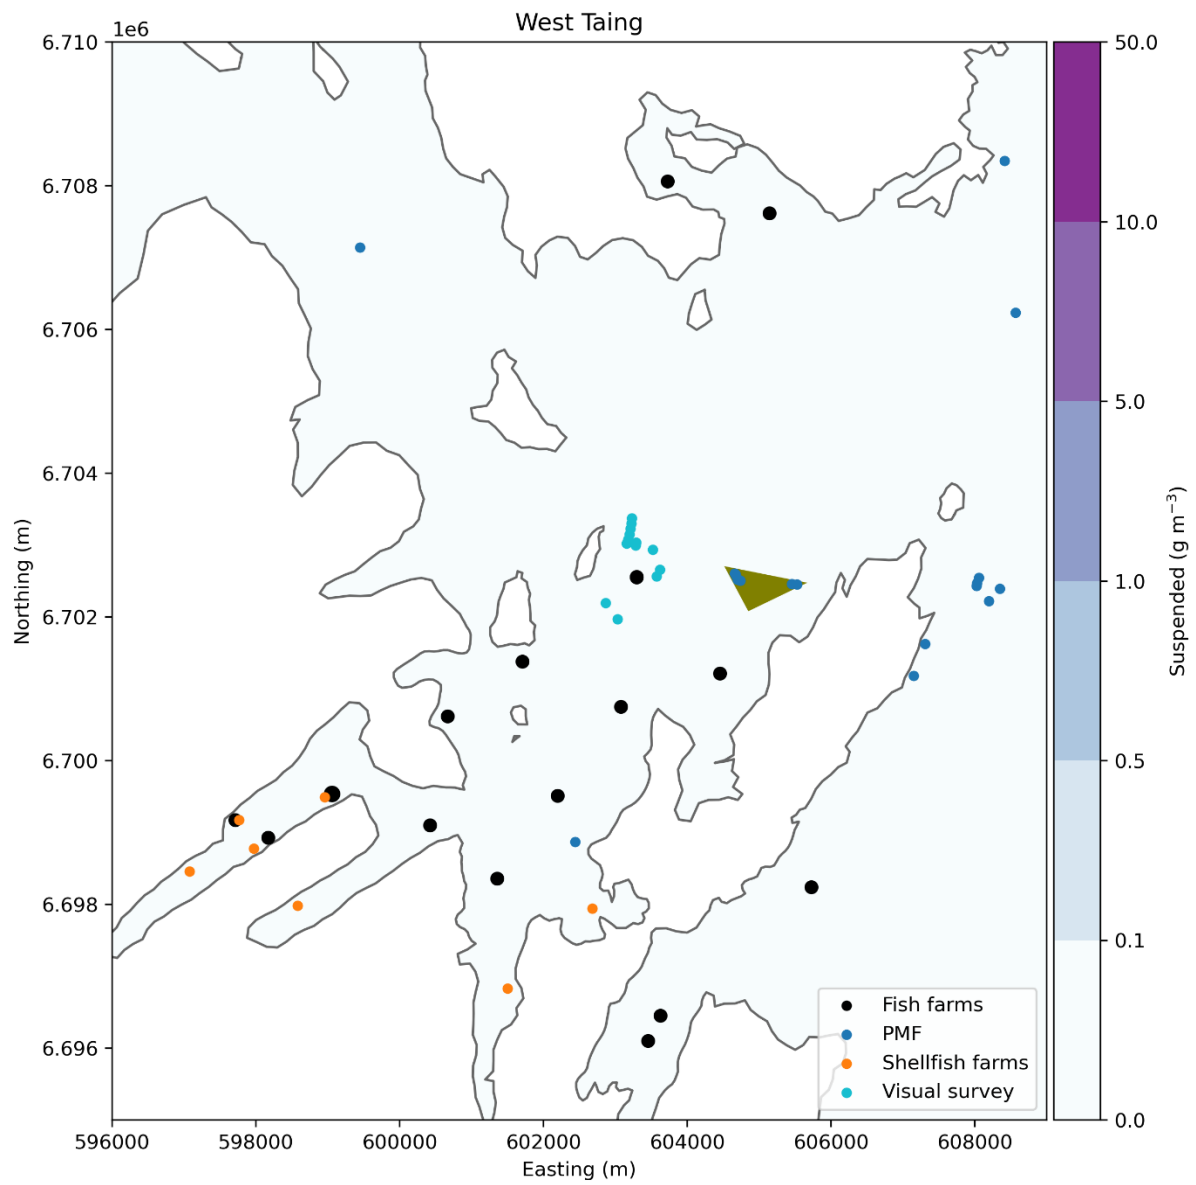

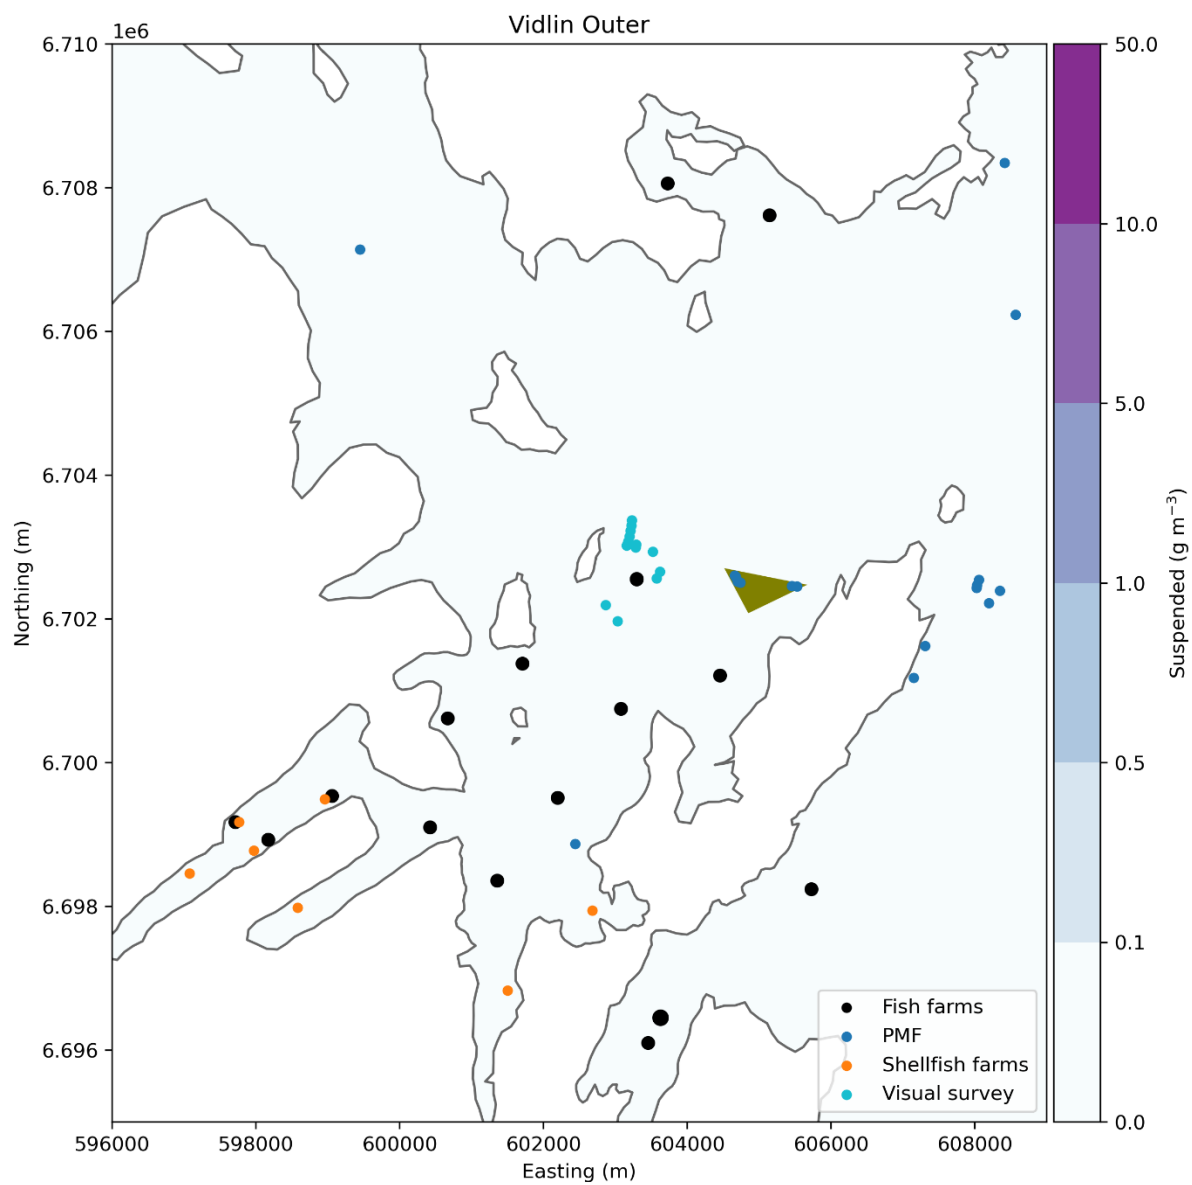

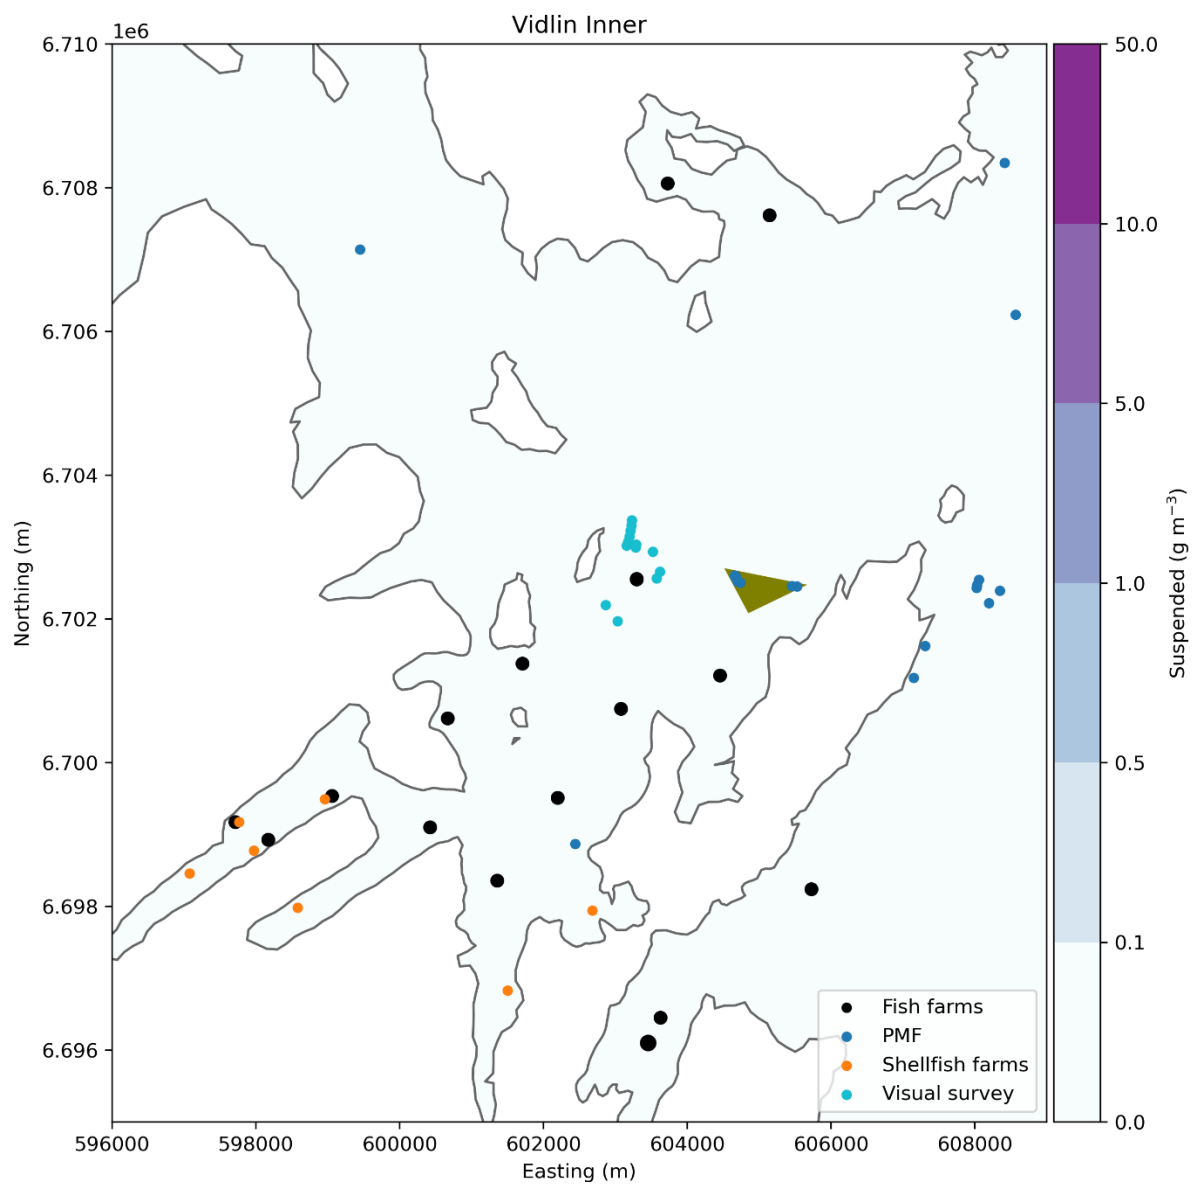

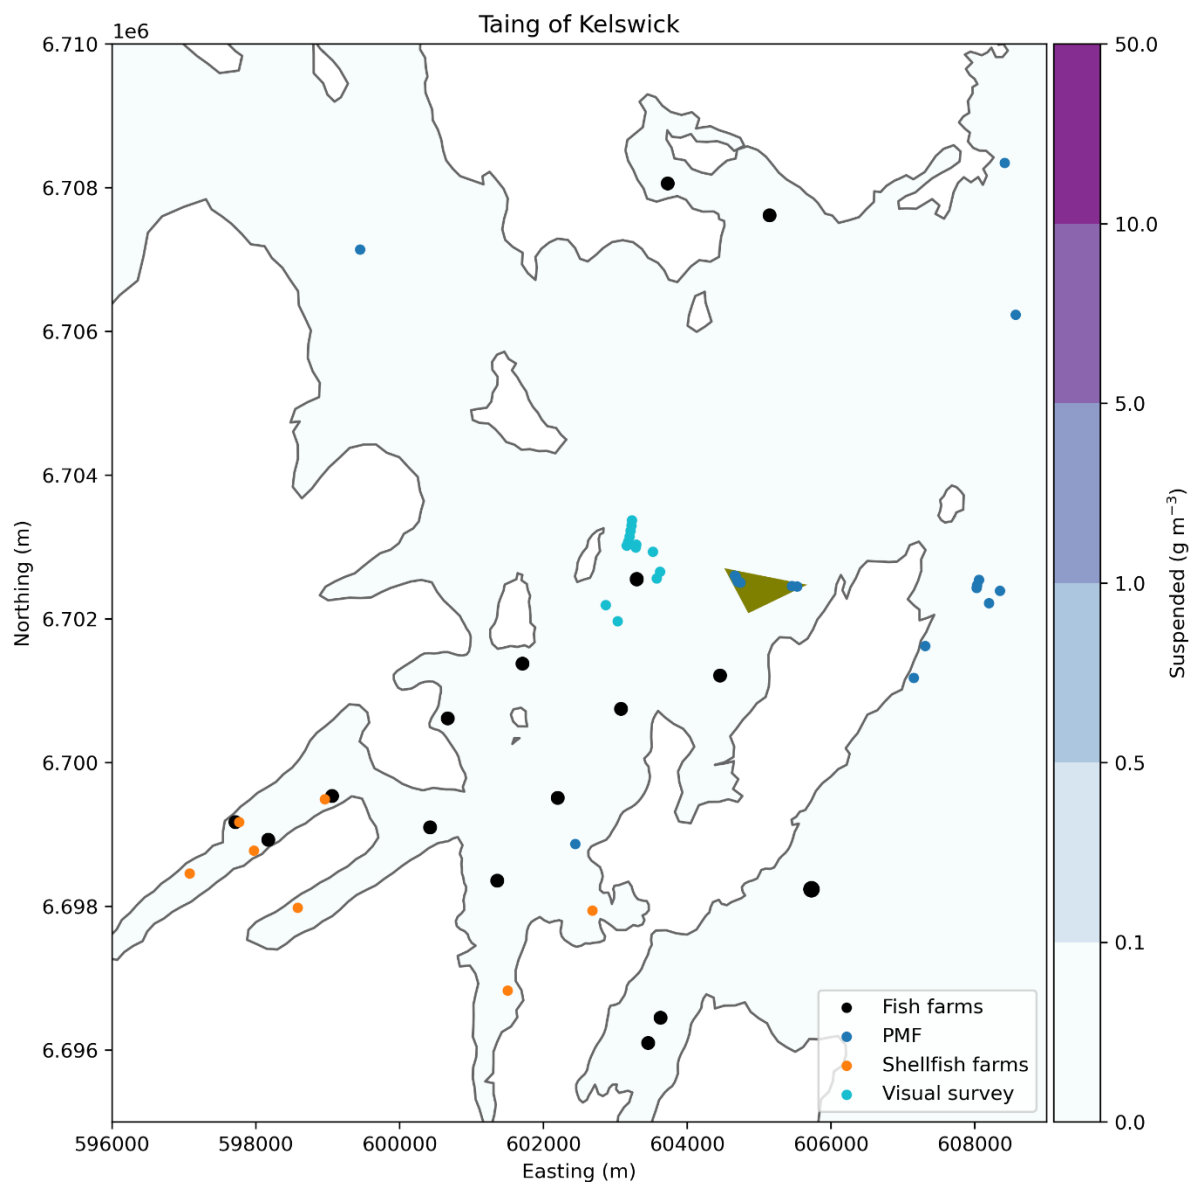

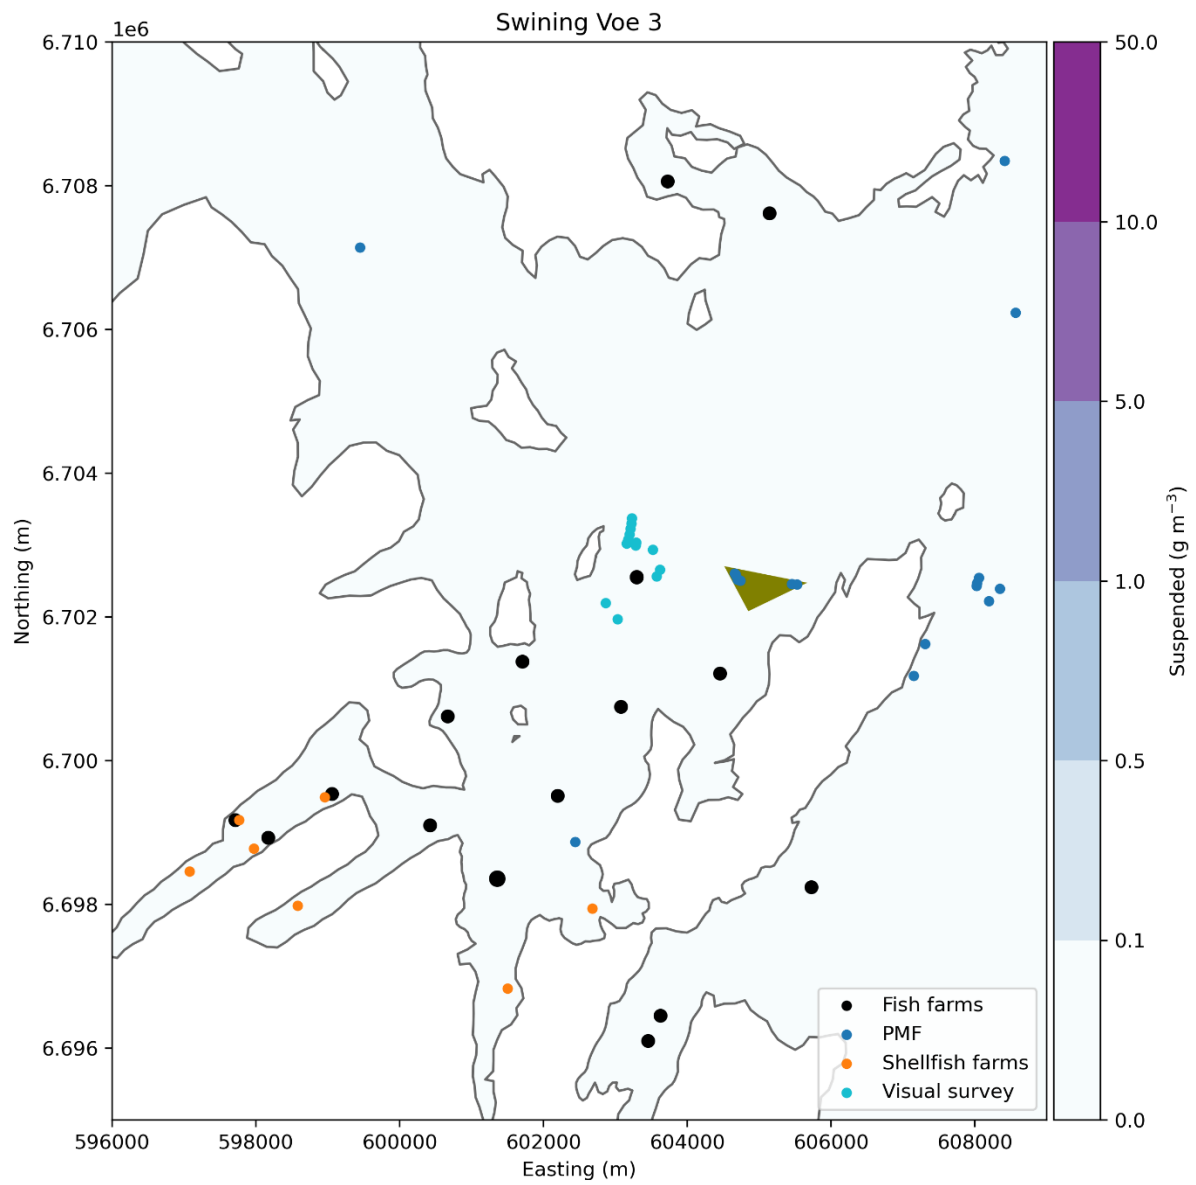

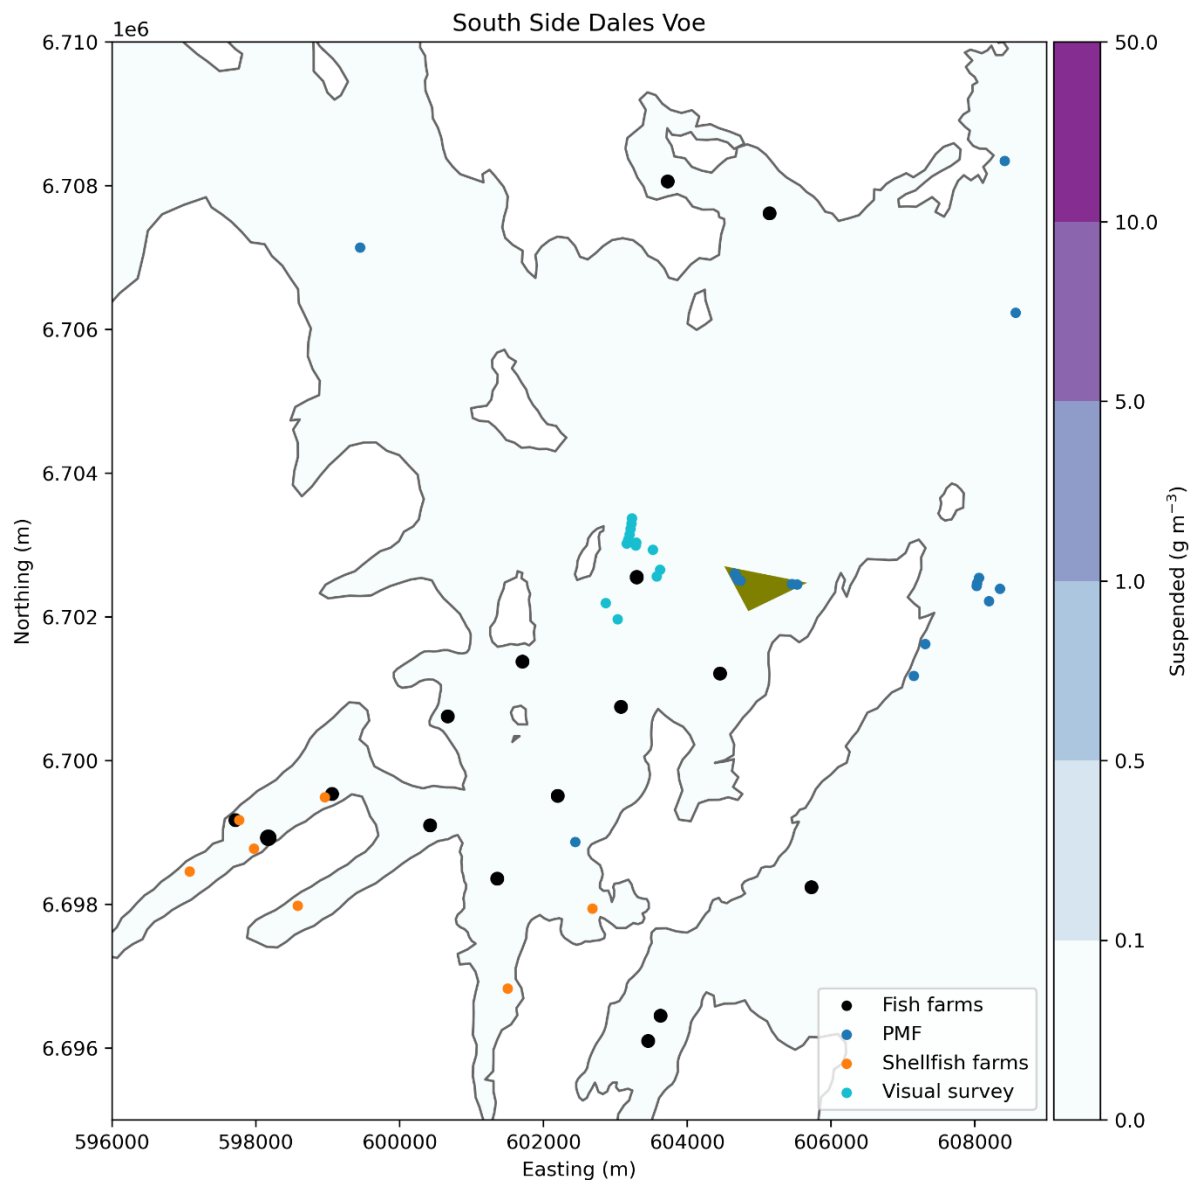

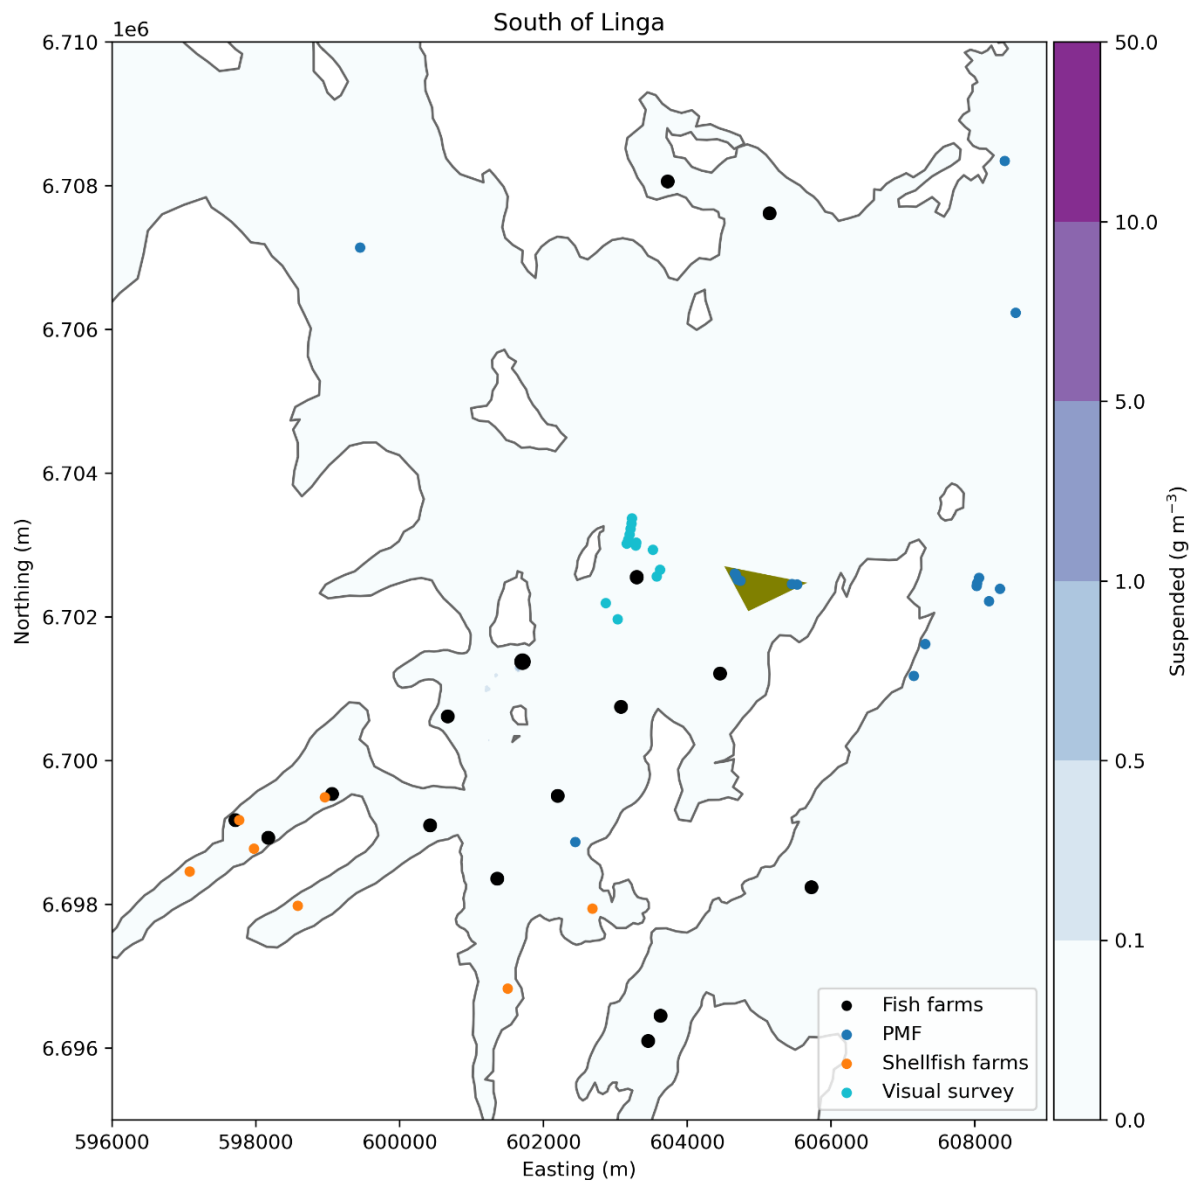

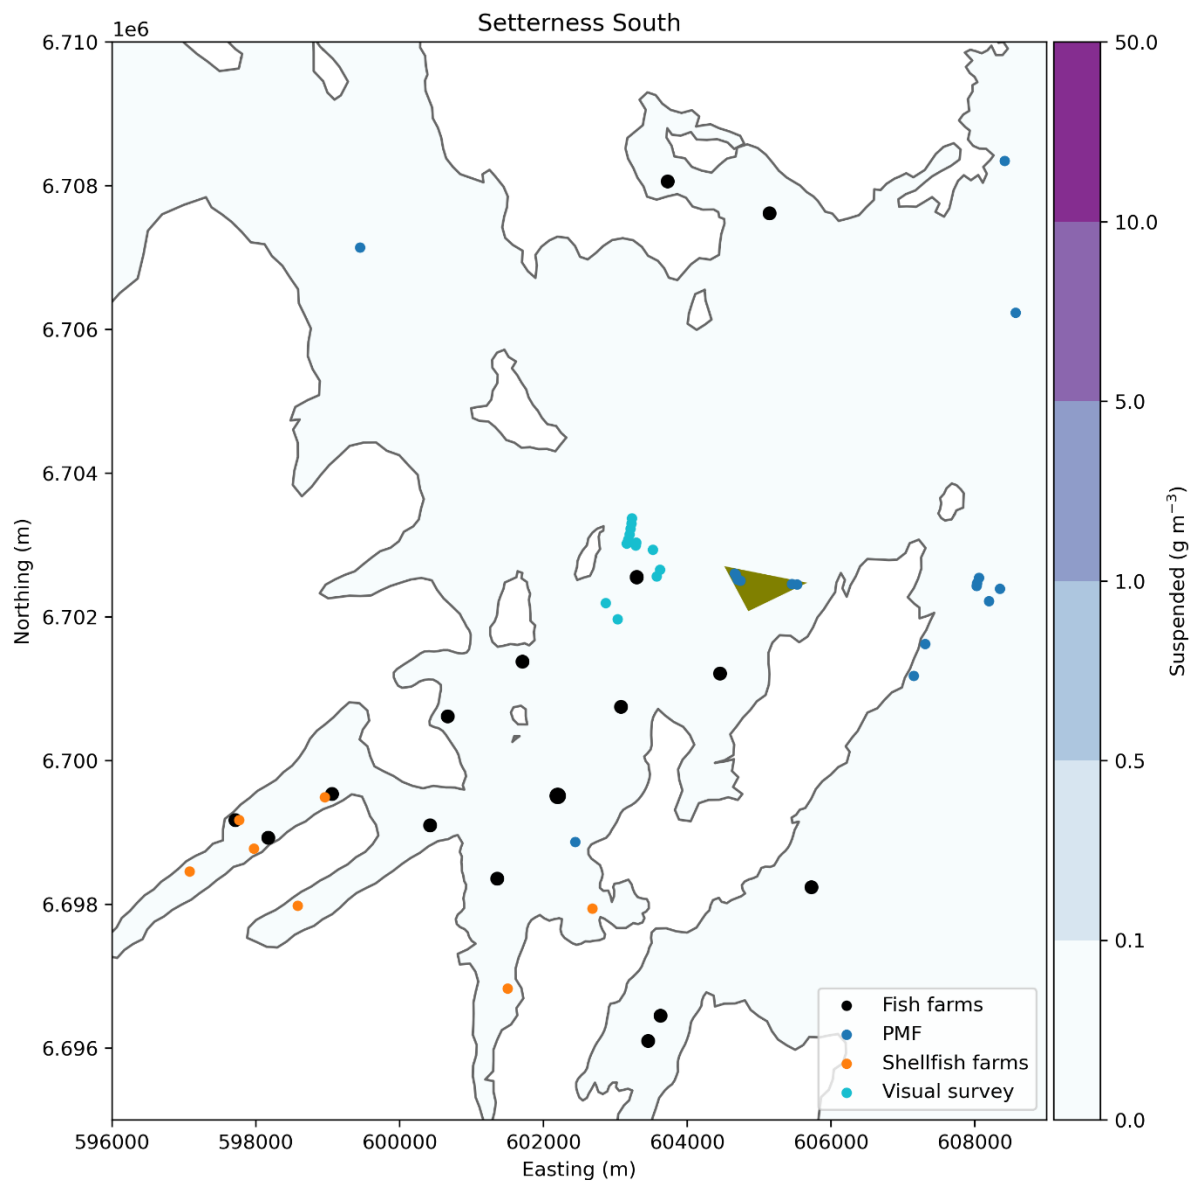

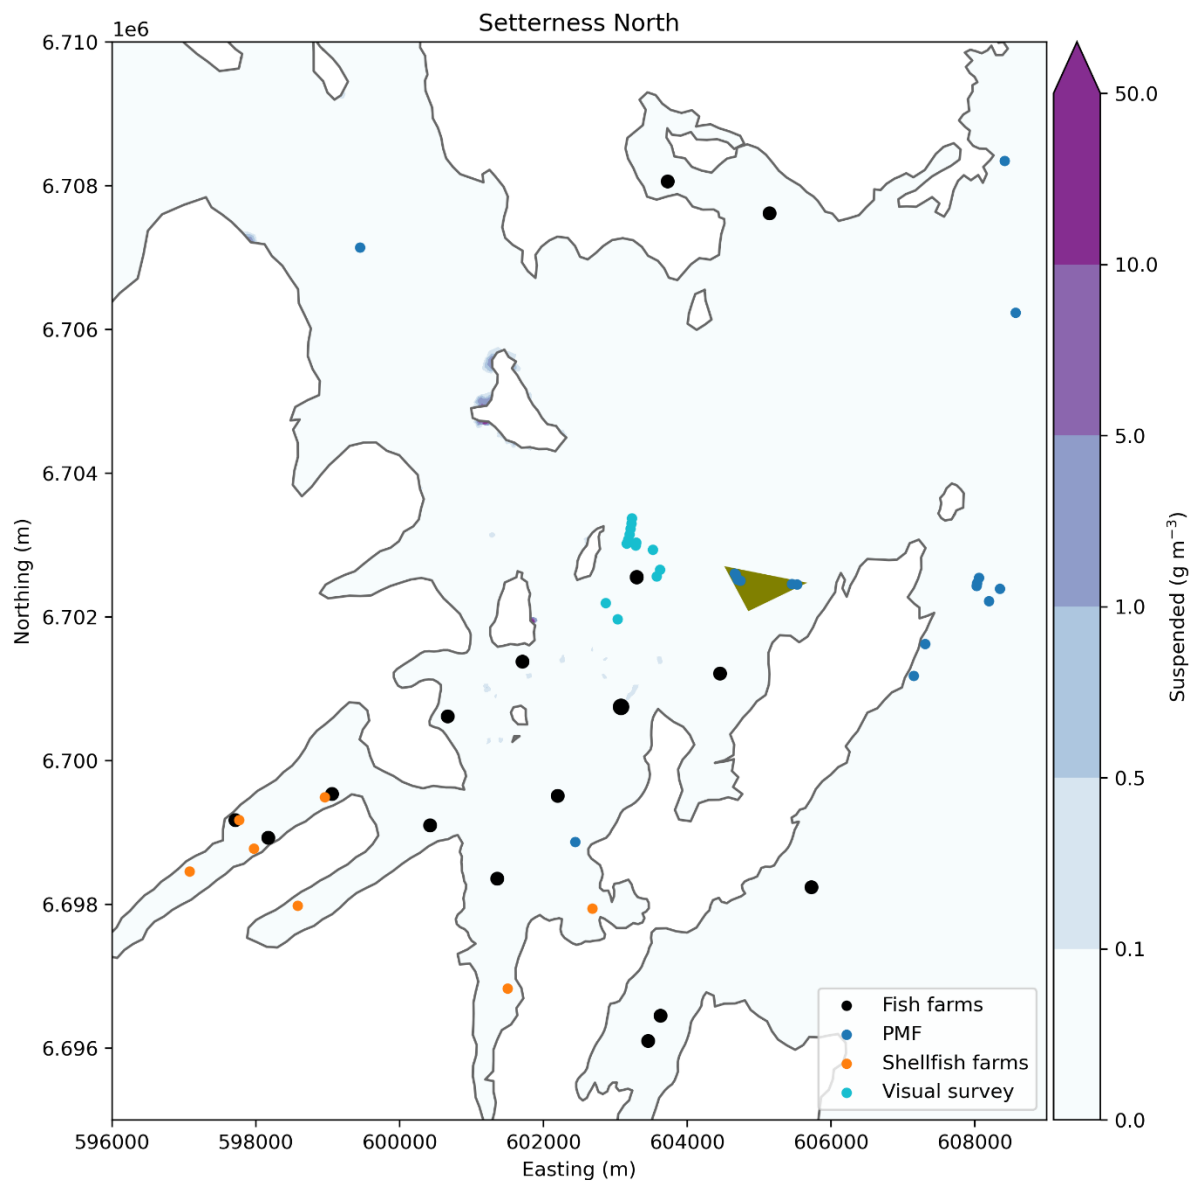

2 Deposited sediment – individual sites

Maps of average deposited sediment concentration of the final 90 days of the simulation for individual site releases. Black points indicate farm locations (large points: included in particle release; small point: used as sensitive features only). Blue points indicate PMFs identified by SEPA, and orange points other shellfish farms identified for impact assessment. The area of maerl defined by SEPA is indicated by the dark yellow triangle.
